**SCI's upgraded Cellbeam software further supports
ASDWestok's advance in to long span market with Eurocode design**

SCI has wholly upgraded and revised ASDWestok's cellular beam design software making it compatible with the latest Windows technologies and platforms and providing an improved user interface for design engineers.

The new software **Cellbeam 8**, which is written in accordance to BS5950 and the latest Eurocode design standards with both UK and Irish annexes, enables designers to add multiple Cellular beams into one project whilst providing multiple design capability, improved reporting and graphical feedback through a refreshed interface.

James Way, Manager, SCI Engineering Software said: 'The Cellbeam 8 release is thoroughly re-visited piece of software, offering a broader design facility that is extensible for future development.'
